McGraw-Hill Primis Custom Publishing

Welcome to PRIMIS Custom Publishing!

In the past, you chose a textbook, and then tailored your course to that particular text.
Well, that was then. And this is now...

Primis Database Publishing and **Primis Custom Publishing** have literally been changing the way instructors look at course materials. The entire premise was built on the fact that different instructors have different needs. Primis Custom Publishing's goal is to customize a text for you that fits *your* needs...*your* teaching technique...*your* style...*your* content...*your* organization...*your* pace.

The publishing industry has permanently changed. We at Primis Custom Publishing can no longer be exclusively "booksellers." We must be consultants, problem solvers, and information providers. Primis Custom Publishing provides a unique service to our customers. We do not simply offer a product and ask you, the professor, to conform to it. We analyze your needs, offer suggestions, and help you create materials that fit your courses and how you teach.

To learn how to create your own custom published textbook, press "PROCESS". To learn about the services we offer, press "OPTIONS".

For further information about this site contact http://web.archive.org/web/19980513002459/http://mhhe.com/emailforms/contact_mhtml. McGraw-Hill Higher Education is one of the many fine businesses of The McGraw-Hill Companies.

A Division of The McGraw-Hill Companies

Why Choose Custom Publishing?

Custom Publishing is many things to many people. It is an opportunity for professors to take a more active role in creating course materials for their students. It is the ability to have the most up-to-date information integrated in a professionally published, customized textbook.

Most importantly, custom publishing is the best way to utilize the vast quantity of information that is available, giving professors a flexible tool that enables them to teach more effectively. The McGraw-Hill Companies created Primis and Primis Custom Publishing to meet the growing demand for customization. Together, as **Primis Custom Publishing**, they provide professional publishing assistance and sophisticated technology to create the best possible textbook.

What is Primis Database Publishing?

Primis database publishing is an innovative and sophisticated electronic custom publishing database that contains a collection of modular, stand-alone text files that can be mixed and matched and then seamlessly arranged to create a book "on-demand" for a particular course.

Each book is built and printed to the instructor's specifications using material designed exclusively for Primis. They are not photocopies or reorganized packages of existing printed materials. Instructors can compile parts of several texts and add articles, review notes, case studies and even their own syllabus to create their own textbook.

Presently there are over 150,000 pages of college-level material on the Primis database spanning over twenty disciplines. They are derived from textbooks, supplements, journals, magazine articles, lab manuals, case studies, literary works, and historical documents.

Other features of a Primis book:

- Can combine selections from any discipline in any order
- Can be three-hole punched or perforated.
- Can include local material within the textbook.
- Can be shrink-wrapped with a traditional book.

Build Your Own Book Online

Primis Custom Publishing

Primis Custom Publishing unites rapid technological advances in the printing industry with customer demands to have greater control of course material. With the help of a custom publisher, professors produce high-quality custom materials that are distributed by McGraw-Hill.

There are four main types of Primis Custom Publishing products:

- I. Stand-alone Material - These projects are usually locally authored material for sale at a specific school. For example:
 - Core textbook for the course
 - Reading books
 - Workbooks
 - Study guides
 - Lab manuals
 - Exercise supplements
 - Software application manuals
 - Software
 - Course notes
 - Prepublication 'national texts'
 - Non-revenue supplements (i.e. instructor's manuals and text banks)
- Out-of-Print Titles - Did your favorite textbook go out of print? There may be a way you can use it again. Leave us a message with the author, title, and publisher of the book and we will look into it.
- Adapted McGraw-Hill Texts - These products are derived from McGraw-Hill copyrighted material. Types of adapted products include:
 - Selected chapters from national texts
 - Changes in binding
 - Texts with enhancements (i.e. tabs, dividers or local material)
 - Combinations of chapters from two or more national texts
- Irwin/McGraw-Hill, WCB/McGraw-Hill, and McGraw-Hill College texts packaged with a Custom Product - These products are a shrink-wrapped package consisting of a new or national book(s) and a custom stand-alone title.

Preface

Add 1 pp. New! Text

Introduction to Law

Chapter 1

Add 1 pg. New! Business Decision: Calling All Smokers

Add 3 pp. New! What is Law?

Add 11 pp. New! Sources of Law

Add 3 pp. New! Legal Sanctions

Add 2 pp. New! A Current Business Example

Add 2 pp. New! Key Terms, Review Questions & Problems, Terminology Review

Courts and Litigation

Chapter 2

Add 1 pg. New! Business Decision: To Defend or to Settle

Add 4 pp. New! Personnel

Add 6 pp. New! Organization of the Court System

Add 4 pp. New! Litigation — An Overview

Add 1 pg. New! Brief Case: Bennett v. Spear

Add 2 pp. New! Full Case: Bennett v. Spear

Add 1 pg. New! Brief Case: World Wide Volkswagen v. Woodson

Add 2 pp. New! Full Case: World Wide Volkswagen v. Woodson

Add 4 pp. New! Pretrial Procedures

Add 1 pg. New! Brief Case: Chudasama v. Mazda Motor Corp.

Add 3 pp. New! Full Case: Chudasama v. Mazda Motor Corp.

Add 3 pp. New! The Trial

Add 1 pg. New! Brief Case: J.E.B. v. Alabama Ex. Rel. T.B.

Add 2 pp. New! Full Case: J.E.B. v. Alabama Ex. Rel. T.B.

Add 2 pp. New! Posttrial Issues

Add 3 pp. New! Key Terms, Review Questions & Problems, Terminology Review

Alternative Dispute Resolution Systems

Chapter 3

Add 2 pp. New! Business Decision: Designing A System

Add 3 pp. New! Movement to Arbitration

Add 1 pg. New! Brief Case: Gilmer v. Interstate/Johnson Lane Corp.

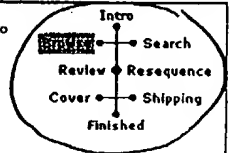

Add 2 pp. New! Full Case: Gilmer v. Interstate/Johnson Lane Corp.

Add 1 pg. New! Brief Case: Doctor's Associates Inc. v. Casarotto

BEST

Basic Engineering Series and Tools

- **Bertoline: Introduction to Graphics Communications for Engineers** — As powerful as today's computers and CAD software have become, they are of little use to engineers who do not fully understand fundamental graphics communications principles and 3-D modeling strategies, or do not possess a high level of visualization ability. *Introduction to Graphics Communications for Engineers*, concentrates on the concepts and skills necessary to sketch and create 2-D drawings and 3-D CAD models. Bertoline teaches students the techniques and standards of communications graphically, so that design ideas can be clearly communicated and produced.
- **Burghardt: Introduction to Engineering Design and Problem Solving** — Aims to interest students in and excite them about engineering, particularly with the creative challenge and reward of engineering design. It provides a window to the real world of engineering practice and looks deeply at the nature of the design process. A variety of design projects and design reports, along with relevant engineering analysis, are included to enhance student learning. Over 250 homework problems also reinforce understanding.
- **Chapman: Introduction to Fortran 90/95** — Emphasizes the big picture. Students are taught from the beginning to develop the habits necessary for programming large projects, going through a detailed design process that breaks the project into logical, manageable portions that can be implemented separately. The text also demands extensive testing and proofing, pointing out common errors through numerous boxes and other pedagogical features.
- **Chapra-Canale: Numerical Methods for Engineers, Third Edition** — Winner of the Meriam/Wiley award given by the American Society for Engineering Education for the best textbook, this highly anticipated revision covers the fundamentals of numerical analysis with a strong computer orientation. Authors Steve Chapra and Ray Canale have included sections on major software packages and libraries, a new section on optimization, and a new chapter on roots of polynomials. Many new homework problems have also been added to each chapter.
- **Donaldson: The Engineering Student Survival Guide** — Not your usual textbook. This guide offers all the inside information and strategies to get the most out of your engineering education and college years (rather than letting it get the most of you). From freshman orientation to senior year, this book covers everything pertinent and unique to all engineering students.
- **D'Orazio and Tan: C Programming for Engineering and Computer Science** — An elementary text aimed at students directly out of high school with no previous exposure to college-level engineering. Written in an "interactive" format which stimulates thought, this text presents students with C program code and asks them questions about it. To answer the questions, the students must deduce the meaning of the code prior to having it explained to them in the subsequent section.
- **Eide-Jenison-Mashaw-Northup: Engineering Fundamentals and Problem Solving, 3/e** — Continuing to focus on problem solving and solution presentation techniques, the new edition has been enhanced by the addition of computer applications that include spreadsheets and mathematical and analysis programs and a new Chapter 14 covering engineering design.
- **Eisenberg: A Beginner's Guide to Technical Communication** — The first text to pattern all of its exercises and examples on writing assignments typically given in first-year engineering courses; furthermore, the material is flexible enough to be just as useful in or out of a technical communication course.
- **Gottfried: Spreadsheet Tools for Engineers** — Explains how to use the latest version of Microsoft's popular spreadsheet package Excel to solve simple problems that commonly arise in engineering analysis. It is intended as a supplementary textbook for use in introductory engineering courses. It uses Microsoft's Excel 97.
- **Greenlaw and Hepp: Introduction to the Internet for Engineers** — Designed for a short course about the World Wide Web, ideal for any engineering or science student. Strikes a good balance between technical details and intuitive explanations that students will enjoy, and covers a wide range of topics that will aid students in their current work and throughout their careers.
- **Palm: Introduction to MATLAB for Engineers** — The ideal introduction to this simple but powerful tool, one aimed specifically

Bell: Basic Biostatistics: Concepts for the Health Sciences

ISBN-10	0072441389
ISBN-13	9780072441389
Price	\$19.79

Download option

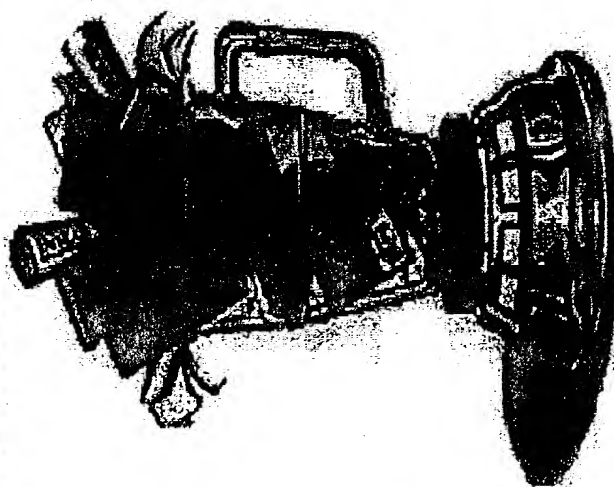

The purpose of the book is twofold: 1) to enable students of the health-related disciplines to apply introductory descriptive and inferential statistical procedures to problems in their field, and 2) to enhance their understanding and critical review of related professional literature. The chapter reviews and application problems (with answers) have been supplemented with a complete student workbook. These materials are student learning and instill confidence in students' self-directed study and classroom approach.
